

Başar Temiz

Computer Engineer

basar.temiz2004@gmail.com • +90 535 745 09 33 • github.com/Basartemiz • linkedin.com/in/bas-artemiz

PROFILE

Başar Temiz is a computer engineer with expertise in artificial intelligence, data analysis, and scalable software systems. He has developed a range of projects that integrate back-end engineering with machine learning, including Django applications and tools for 3D reconstruction utilizing NeRF and satellite imagery. With a strong educational foundation from Boğaziçi University and practical experience in technologies such as Python, Docker, and React, Başar aims to create impactful solutions that enhance user interaction with data while valuing teamwork and clear communication.

EDUCATION

Bachelor's Degree in Computer Engineering at Boğaziçi University 2020–2024

- Collaborated on research involving depth estimation and generative AI.

Machine Learning Course on Coursera 2021

- Completed a foundational course on supervised and unsupervised learning methods.

Advanced Python Programming on edX 2022

- Completed a course focusing on advanced concepts in Python programming.

EXPERIENCE

Software Engineer Intern at Baykar 2023–Present

- Contributed to the development of UAV software systems and collaborated with cross-functional teams to enhance system performance.

Research Assistant at Boğaziçi University 2021–2022

- Assisted in research involving depth estimation and generative AI.

SKILLS

Technical

Python Docker React Django LangChain Machine Learning

Proficient in developing scalable software systems and implementing machine learning solutions.

Analytical

Data Analysis Depth Estimation Generative AI

Experienced in analyzing data and developing AI tools for real-world applications.

Soft

Teamwork Communication

Strong collaboration and communication skills developed through internships and project leadership.

Creative

System Architecture Design

Skilled in designing clean and maintainable software architectures.
